

# V Moses Navarag

Hyderabad, India · [moses7054@gmail.com](mailto:moses7054@gmail.com) · [linkedin.com/in/vaddi-moses](https://linkedin.com/in/vaddi-moses) · [github.com/moses7054](https://github.com/moses7054)

Full-stack and AI/ML application developer who builds end-to-end document-processing systems — OCR, LLM-based extraction, and semantic search over relational and vector data. Strong in Python, REST API design, and PostgreSQL, with hands-on experience integrating LLM platforms (Anthropic, OpenAI, Google Vertex AI) and shipping production apps on Docker. Built and deployed an AI Document Management POC explicitly architected as a blueprint for the SAP BTP / HANA Cloud / Azure OpenAI stack.

## Featured Projects

---

### AI-Powered Invoice Parser — Document Management System · [parseinvoice.xyz](https://parseinvoice.xyz)

*Python · FastAPI · React/TypeScript · PostgreSQL + pgvector · Claude / GPT-4o · Docker*

- Built a document pipeline that ingests **PDFs and images**, runs **OCR** (Tesseract) and text extraction, then uses an LLM to extract 13+ structured fields plus line items into a typed schema, with a JSONB catch-all for non-standard fields.
- Implemented **hybrid Q&A**: a pure intent router sends aggregate questions to SQL and meaning-based questions to **semantic vector search** over pgvector embeddings, citing source documents for each answer.
- Designed a **provider-agnostic LLM layer** with live switching between Claude and GPT-4o for extraction and Q&A — analogous to swapping an **Azure OpenAI** deployment via the SAP BTP Destination Service.
- Built and consumed **REST APIs** (FastAPI) and designed the relational + vector **data model** on PostgreSQL + pgvector — the open-source equivalent of **HANA Cloud + HANA Vector Engine**.
- Developed the **document upload, search, and detail UI** in React/TypeScript (analogous to UI5/Fiori) and deployed with Docker (Railway + Vercel) on a custom domain.
- Validated multilingual extraction (English + German) and wrote a 30-test integration and unit suite.

### Compliance Document Scanner — AI Due-Diligence Tool

*Google Vertex AI · Python · Document analysis*

- Used **Google Vertex AI** to analyse documents from companies seeking investment and classify them against **US and EU regulatory frameworks**.
- Determined which laws each company is **required to comply** with and flagged **current non-compliance** — turning unstructured legal/operational docs into a structured compliance report.
- Demonstrates AI/ML document classification and semantic understanding on a second major cloud AI platform, complementing the Anthropic/OpenAI work above.

## Work Experience

---

### Teacher — Turbin3 (Builders Cohort)

*Remote · Apr 2025 – Present*

- Mentor developers building backend systems and on-chain programs; lead office hours, breakout rooms, and code reviews.
- Help students ideate and ship capstone projects end-to-end.

### Full-Stack Developer — Syntax Studios (Contract)

*Remote · Oct 2025 – Nov 2025*

- Designed, built, and tested backend programs from client requirements, producing clear architectural diagrams and technical specifications.
- Wrote TypeScript integration scripts to exercise and validate services end-to-end.

### Backend Lead — Menagerie (Turbin3 Elite)

*Remote · Apr 2025 – Jun 2025*

- Led the design of a scalable, modular backend architecture.
- Built a modular backend on PostgreSQL with type-safe REST/tRPC APIs and authentication (NextAuth).

### Solana Developer — Turbin3 Pinocchio

*Remote · Sep 2025 – Nov 2025*

- Acted as PM and contributor porting low-level programs; coordinated scope and delivery.

## Skills

---

**Languages:** Python, TypeScript, JavaScript, Rust, SQL

**AI/ML:** LLM integration (Anthropic, OpenAI, Google Vertex AI), OCR, document classification, text extraction, embeddings & semantic/vector search, retrieval-augmented Q&A, prompt design

**Backend & Data:** FastAPI, REST API design, PostgreSQL, pgvector, MongoDB, tRPC, Drizzle ORM

**Frontend:** React, TypeScript, Tailwind, Next.js

**Infra:** Docker, Vercel, Railway, Git

**SAP-adjacent:** BTP architecture mapping — Document Information Extraction, HANA Cloud + Vector Engine, Azure OpenAI via Destination Service, UI5/Fiori

## Open Source Contributions

---

- **Rust Compiler / Clippy** — merged contributions to the Rust toolchain: rust-lang/rustc\_codegen\_gcc #896, rust-lang/rust-clippy #17065 and #16486.
- **Solana ecosystem** — bug fixes and documentation for solana-foundation/templates, tape-drive, and yellowstone-vixen.

## Education

---

- **Turbin3** — Builders Cohort, Advanced SVM, Elite, Pinocchio, Magic Blocks · 2025 – Present
- **Master of Computer Application**, IGNOU, India · 2023 – 2025
- **B.Sc. Computer Science**, Osmania University, India · 2018 – 2021
